Gaia Green Glacial Rock Dust is a natural mineral product, which is produced over many thousands of years by glacial action. As the glacier recedes, it leaves behind deposits of "glacial moraine". These deposits are mined, dried, and screened for agricultural and horticultural re-mineralization. **Gaia Green Glacial Rock Dust** can replace key elements that have been depleted from the soil over the years, replacing these missing minerals in a form readily used by soil microbes to create healthy soil. **Gaia Green Glacial Rock Dust** lets the soil re-create the colloids (minerals and humus) which are needed to improve soil structure, moisture holding properties, nutrient availability and bacterial action. When the correct balance is achieved, organic matter is turned into humus and the soil becomes a favorable environment for a host of beneficial molds, fungi, bacteria and earthworms. When this happens, the living soil becomes a buffer to the many variables gardeners must contend with.

Gaia Green Glacial Rock Dust can increase phosphorous availability, provide an excellent source of calcium, iron, magnesium and potassium, and supply trace elements and micronutrients. It can also increase moisture-holding properties in the soil, improve the cation exchange capacity, and improve soil structure and drainage. You cannot over apply **Gaia Green Glacial Rock Dust**! It will not burn!

Uses:

Gaia Green Glacial Rock Dust is our best product for replacing depleted minerals in your soil. This product feeds soil microorganisms. Use it everywhere on everything! Add our Glacial Rock Dust to any of our other products to enhance their performance, including compost.

SUGGESTED APPLICATION RATES:

Garden & Landscape: Up to 10 kg. (22 lbs.) per 10 sq. m. (100 sq. ft.). Gently dig into the soil surface up to once per year or as desired.

Transplanting and Pre-Mixing Soil for hanging baskets, potted plants, and planter boxes:

Thoroughly mix 120ml. (8tbsp.) into 4L (1gal.) of soil or growing medium prior to planting.

Top Dressing hanging baskets, potted plants, and planter boxes: 60ml. (4tbsp.) per 4L (1gal.) of soil or growing medium. Apply up to once per month or as desired. Gently dig **Gaia Green Glacial Rock Dust** into the soil surface where possible.

Composting: Mix liberally into compost pile or bin as microbial enhancer during processing.

Also mix **Gaia Green Glacial Rock Dust** with any finished compost to improve mineral balance.
